

## Century Industries Announces its latest Enhancement to the Supreme Aluminum Folding Attic Stairways Category

Century Industries is proud to announce the availability of two industry first aluminum attic stairways, the **SAG-100 (30"x 54" x 10'4")** and **SAG-89 (30"x 54"x 8'9")**. These new model sizes are part of our popular Supreme Aluminum stair line.

Designed with safety, durability, and ease of use, these units are manufactured with the same high quality extruded aluminum as our other Supreme models and are rated for 350 lbs. They are third party certified and exceed the national industry standard for weight rating. These rust-resistant, lighter-weight aluminum stairs also include heavy-duty side hinges and re-enforced bracing under each step, allowing for safe and stable access to your attic. With the adjustable foot extender and 1x4 steps and stiles the SAG-89 and SAG-100 come fully assembled and ready to install.

If you want to reduce your energy bills, then order the SAG-100 & SAG-89 stairs with the Energy Efficiency Bundle. These units come with factory installed FireGuard Fire-retardant door panel, Thermoshield insulated door panel, and 4 sided weather-stripping. The Energy Efficiency Bundle has been certified by a third party laboratory to reduce air and heat loss in the home by 50%, thereby significantly reducing energy costs.

The SAG-100 and SAG-89 units also work well with our Adjustable Pull-down Pole Kit (model code AAPD). The kit replaces the unsightly pull cord with a decorative hook attachment with a paintable base-plate. The adjustable pole allows the user to open the stair from floor level and allow folding and unfolding of the unit without additional support.

By setting the industry benchmark Century will continue to bring you the latest in innovative attic stairways while continuing to deliver the safest products on the market.
